

Testing Proposal for Your Fuel Saving with NGT(Nano Graphite Tablet)

Wangtech, May.01.2012

(1)Purpose :

Within a limited time period people can clarify the effectiveness of NGT.

(2)Preparation :

All the testing vehicles should be well examined (including: engine, oil, coolant, braking system, gear and tire etc.) in order to make sure the test smoothly.

(3)Numbers of testing vehicles :

Select at least 3 vehicles(the displacement of engine at least 2000cc.) for testing.

(4)Conditions for testing vehicles :

The age of testing vehicles are around 5 years.

The existing total mileages for testing vehicles are about 60,000 miles or 100,000Km.

(5)Testing route and total distance for testing :

Testing route is better in highway, single distance will be at least 100 km. The speed for testing vehicle should keep around 100 km/hours.

The total distance for each testing vehicle is no less than 3,000 km.

PS:

Before adding NGT, you should confirm the existing fuel consumption of the same route for each testing vehicle, the confirmed record will take as a comparison with which the record happened in latter test.
